Customer Segment and Risk Guide

Customer Segment and Risk Guide

Version: 1.0 (Golden Demo)
Disclaimer: Synthetic demo content only. Not credit scoring, fraud scoring, or real risk policy.

1. Customer segmentation overview

Retail banking customers in the demo are grouped into three segments for service and analytics: Retail, Priority, and SME.

2. Retail customers

Standard mass-market customers with everyday banking needs. Marketing and service levels follow the baseline retail program.

3. Priority customers

Priority Customer: A higher-value retail customer segment receiving enhanced service treatment, including preferential queue handling and relationship manager access in this demo narrative.

4. SME customers

Small and medium enterprise customers with business accounts. SME segment reflects business banking packages and higher typical transaction volumes in the demo dataset.

5. Customer status definitions

Status | Meaning
Active | Currently transacting or within normal engagement window.
Dormant | No recent activity; account remains open.
Closed | Relationship ended; no new activity expected.

6. Risk tier definitions

Tier | Demo meaning
Low | Standard monitoring.
Medium | Elevated review frequency in analytics scenarios.
High | Elevated monitoring requirements for demo analytical purposes.

High Risk: A classification indicating elevated monitoring requirements for demo analytical purposes. It does not represent a real credit or fraud score.

7. Business interpretation guidance

When combining segment and risk tier, analysts should treat Priority and High Risk as a cue for enhanced monitoring in storytelling demos, not as automated real-world decisions.

A Priority customer with repeated failed transactions may warrant operational review under demo guidance, combining segment service expectations with payment reliability signals.

8. Example analytical questions

- How many Active Priority customers are in the High Risk tier?
- What share of SME customers are Dormant?
- Which cities have the highest count of Medium risk Retail customers?

9. Glossary

- Segment:: Retail, Priority, or SME classification.
- Risk tier:: Low, Medium, or High demo monitoring class.
- Status:: Active, Dormant, or Closed lifecycle state.
