Retail Banking Transaction Policy

Retail Banking Transaction Policy

Version: 1.0 (Golden Demo)
Effective date: 2026-01-01
Disclaimer: Synthetic demo content only. Not real bank policy or legal advice.

1. Purpose

This document defines business meanings for transaction status, channels, and types used in the Golden Path retail banking demo. It complements structured transaction data; it does not replace core banking systems.

2. Transaction status definitions

Successful transaction (SUCCESS)

A transaction completed successfully and is included in completed transaction value calculations unless another metric explicitly states otherwise.

Failed transaction (FAILED)

A transaction that did not complete successfully. Failed transactions are counted in operational monitoring but are excluded from completed value totals by default.

Pending transaction (PENDING)

A transaction awaiting final processing. Pending items must not be treated as completed value by default until status changes to SUCCESS.

3. Channel definitions

Channel | Description
Mobile Banking | Customer-initiated activity through the mobile application.
Internet Banking | Customer-initiated activity through the web banking portal.
ATM | Automated teller machine, including cash withdrawal and balance inquiry.
Branch | Over-the-counter service at a physical branch.
EDC | Electronic data capture at merchants (card-present retail).

4. Transaction type definitions

- Transfer:: Movement of funds between accounts.
- Payment:: Outbound payment to a beneficiary or biller.
- Purchase:: Merchant or retail spend.
- Withdrawal:: Cash outflow, commonly via ATM or branch.
- Deposit:: Cash or check deposit increasing balance.

5. Transaction monitoring considerations

Operations teams review failed and pending volumes by channel daily. Spikes in FAILED activity on a channel may indicate infrastructure or fraud-pattern review triggers in this demo scenario.

6. Example business rules

Completed value: Sum of SUCCESS transaction amounts unless the analysis explicitly includes other statuses.

Failed Transaction Rate: The number of failed transactions divided by total transaction attempts (SUCCESS + FAILED + PENDING counted as attempts unless a report excludes PENDING).

Pending exposure: PENDING amounts are tracked separately and excluded from completed totals until settled.

7. Glossary

- Attempt:: Any transaction row regardless of final status.
- Completed value:: SUCCESS amounts under default rules.
- Channel mix:: Distribution of attempts or value across Mobile Banking, Internet Banking, ATM, Branch, and EDC.
